Hi Lyndsey,

Here is our current side deck - identical to earlier version with the addition of slide 15-19 on chloride mixing. As these slides directly tie to SSPA's source water mixing work, I'd suggest we have Bob jump directly to these set of slides so that the connection to the hypothesis testing is clear and immediate.

I am sensitive to the amount of overall material Matt has for the meeting, so we can discuss trimming some more. Our slides that show measured v modeled issues don't necessarily need discussion, especially if we send out the slide deck early. They do provide direct examples of disconnects that may affect the reliability of the model outcomes. Also suggest we consider cutting the short term model improvement slides and even the overall project goals, in the spirit of keeping this a SME-focused technical discussion. I look forward to your perspective.

Because we are still confirming availabilities on our end, I'll reach out informally to Susan and let her know we are ready to have the AOC meeting and are searching for times as early as next Monday 5/10. Meetings will need to start early to accommodate Matt, Sorab and others in eastern time zones.

Fenix
